

Pioneering Solventless Production

As our commitment to excellence and innovation, we have developed a vertical supply chain dedicated entirely to solventless production.

This new line introduces our groundbreaking live “ultra full-spectrum” medical cannabis products.

Our live rosin products, detailed in our 2024 Live Rosin catalogue (see website), offer a superior alternative to previous distillate products, using activated live rosin.

Pioneering Solventless Value Chain

- **Trichome Cultivation Farm Optimization:** Selected from over 50 cultivars, we selected with our partners 15 high-yielding trichome varieties, ideal for rosin, and terpene extraction
- **Dedicated Greenhouse Cultivation:** Capable of producing up to 25-kgs per month of mechanically purified trichomes, ensuring ultra premium quality through meticulous flower harvesting, and dewatering into trichomes.
- **Pharmaceutical GMP Validation:** Our live rosin concentrate meets the highest standards for inhalation and oral use, validated within our facility.

Live Rosin

Applications of our “ultra full-spectrum” activated live rosin

- Inhalation cartridges (0.5ml and 1ml)
- Oral formulations with superior flavour and effects
- Edibles/gummies

What is “ultra full-spectrum”?

The graph on the left demonstrates the superior full-spectrum nature of solventless fresh frozen derived products. Compared to a flower or purified extract typically used in formulations we see almost a 500% increase in terpene content and variety of low concentration terpenes.

Elevate your business with GES Labs and our solventless products now at the price of our previous ethanol derived pricing.
